

Environmental Friendly Wood Protection System

Combination of harmless boron and CS-Coat W realizes unheard-of anti-decay and anti-termite features while maintaining healthy and safe environments.

CS-Coat W

Protect wood from decay and insects!

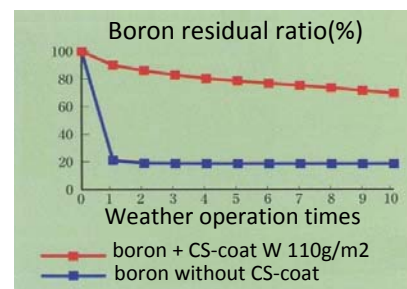

Boron has been well known as a wood protection chemical for a long time. However, its effect does not sustain more than a year, because it is easily dissolved with water and rain. When boron-treated woods are used out of doors, boron dissolves out of wood.

CS-coat W allows boron to permeate into wood, and cover and seal its surface. CS-coat is the newest wood protection system which prevents dissolution of boron from wood. CS-coat W is used without any solvent, and has no environmental impact. CS-coat W maybe used on all wood structural elements (i.e. houses, bridges, seawalls, etc).

CS-coat W keeps boron in wood longer than for ten years. Without CS-coat W -- less than for one year.

Sealing effect for decay and insects sustains for 10 years with only one coating.
